Math 106L: Lab Calculus and Functions II – Grading

Grading in Math 106L consists mostly of a cycle of submission, correction, and resubmission. This allows students to master material over time.

Assignment Assessment

- You will be given a chance to submit, receive feedback, and redo work on individual and group assignments before they are marked as complete. Once an assignment has been marked complete, you will receive either get a pass or a no-pass for it.
- For group assignments, all members of a group will be expected to contribute approximately equally to all assignments. When group members do not contribute equally, the burden falls on others. In order to avoid such issues, it is important that if you feel someone did not pull their weight, you let your instructor know. The instructor will then work to ensure that group member does more work on the resubmit, and/or on subsequent assignments.
- The 'big assignments' (aka midterms) will be graded numerically. There will be two components for these:
  - A take-home portion (two of them):
    - You will be able to resubmit the take-home portion, and will receive 2/3 credit for answers that needed redoing if they are correct on resubmission: if you scored 70% on the assignment, then perfectly corrected your mistakes, you will receive an overall score of $90\% = 70\% + \frac{2}{3} \times 30\%$.
    - A passing score on the take-home portions of the assignments will be 80%.
    - In order to pass the class, you must pass both, and your average score across all take-home portions must be at least 85%.
  - An in-class exam:
    - There will be three in-class portions (on Mon 2/2, Tue 3/17, and Mon 4/20).
    - These will be strictly closed-book and paper-based.
    - A passing score on the in-class portion will be 55%.
    - In order to pass the class, you must pass two of three, and your average score across all in-class portions must be at least 60%.

Assignment Content, Deadlines, and Grading

- For all classes in which a worksheet is used (the vast majority of MWF sessions), the assignment will be completion of the worksheet. Time will be given in class for students to work on worksheets and receive immediate feedback from teachers or TAs.
- **The deadline for a given week's worksheet assignments will be Monday of the following week at 8am.**[1] However, since each class builds on previous material, it is strongly recommended that you complete the worksheet before the next class.
- In addition, a few additional assignments are listed on the syllabus with their deadlines.
- Graders and instructors will aim to get new worksheets commented upon and resubmissions graded by the Friday morning after they are submitted. **Resubmission deadlines will be the following Tuesday at 8am.**
- For any given assignment, both deadlines must be met in order to receive credit for the assignment. In other words, you must both submit and resubmit each assignment.

[1] With the exception of Worksheet 15-3, which will be due on the following Wednesday.

- Students who submit blank (or substantially blank) first submissions will lose 0.5 credits, regardless of the quality of the resubmission. This will also apply to submissions clearly lacking in effort.
- Group projects or assignments will be assigned to some labs (see webpage for details). Their deadlines are also listed on the webpage. Details of each project will be given at the end of the respective TTh lab period.

To summarize, every week, you will submit:

- **On Monday: A first submission of the previous week's worksheets;**
- **On Tuesday: A resubmission of the worksheets you received comments on the prior Friday.**

Passing the Class

106L is an S/U (pass/fail) class. In order to pass the class, you will need to:

- accumulate 31 out of 34 credits on individual assignments (32 required worksheets, one lab quiz, one individual lab assignment). Three credits must come from the last four worksheets, and students must pass the last worksheet;
- submit both take home 'big assignments', achieve an average of 85% on them, and no less than 80% on any one of them.
- Pass two of the three in-class midterms with at least 55%, and get an average of 60% across all three.
- meaningfully contribute to all group assignments, and receive credit for all but one. One credit must come from the last lab report.
- pass 8 out of 10 class quizzes. One credit must come from the last quiz.
- Attend all classes and labs, unless specifically and explicitly excused. Up to three unexcused absences are allowed.

Textbook

No questions from the textbook will be collected or graded, as full solutions are available on Canvas. Nonetheless, it is recommended that students read relevant textbook sections and use the questions at the end of each section to self-assess progress. This can provide useful self-guided feedback on your progress through the material.
